

R markdown lab

Jeff Leek

July 3, 2015

1. Try compiling this document using the “Knit HTML” button. What files are produced?
2. Edit the output to be “pdf_document” and recompile. What files are produced?
3. Edit the output to be “word_document” and recompile. What files are produced?
4. What does the label “chunk1” do in the following code chunk?

```
x = rnorm(100)
plot(x)
```

This is a primary header. Add a secondary header with ## on the line below and recompile.

secondary header added

5. Change fig.height to something larger/smaller and see what happens (was 5 changed to 3)

```
x = rnorm(100)
plot(x)
```

6. Add a chunk option of `fig.align="center"` to center this plot

```
x = rnorm(100)
plot(x)
```

7. Add a chunk option of `echo=FALSE` and see what happens

8. Uncomment this code and recompile the document. Then add a chunk command `cache=TRUE` and recompile. What files are created? Try compiling one more time.

```
#Sys.sleep(10)
```

9. Check out the docs at: <http://rmarkdown.rstudio.com/> and look under formats. See if you can create and compile an R markdown presentation.
10. Add the command `devtools::session_info()` to this chunk and look at the output
